DETAILED ACTION

EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Mr. Henry Schanzer on August 7, 2003.

The application has been amended as follows:

A) In claim 21, line 14, change "equal to $[1/\omega C_E]$ " into --- equal to $(1/\omega C_E)$ ---.

REASONS FOR ALLOWANCE

1. The following is an examiner's statement of reasons for allowance: The prior art discloses a wave energy converter having a shell mounted about a piston which when placed in a body of water is responsive to waves in the body of water for producing motion between the shell and the piston, an electric generator responsive to the motion between the shell and the piston. However, the prior art fails to show, in combination with the invention and in light of the specifications, having one voltage and current which is a function of the relative motion and

coupling a load to the output of the electric generator and the load having an impedance whose value is selected to be a function of the period of the waves in the body of water and of the mass of the water in the shell and having a reactive component coupled to the output of the electric generator in series with the load and the reactive component being selected to be the other one of the inductive and capacitive reactance exhibited at the output of the electrical generator for enhancing resonance in the wave energy converter and the reactive means being selected to have a value for causing the output of the electric generator including the load to resonate with the mass (M_T) of the wave energy converter.

Moreover, the present invention determines $1/(\omega \cdot C_E)$, where ω is equal to the angular frequency of the waves expressible as $2\pi/T$ where T is the period of the waves and C_E is equal to MT/K where MT is equal to the mass of the shell and the mass of the water moved by the shell and K is an electromechanical coupling constant and varying the impedance of the load as a function of changes in at least one of the frequency, amplitude and phase of the waves providing the input power to the WEC system for maintaining the impedance of the load at a predetermined optimum value.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
